

Howdy,

Having Windows automatically update whenever it feels like it can be most inconvenient. Here are several ways to defeat Windows from performing this automatically.

Note Well: Be sure to periodically check for updates on your own, then apply the updates to keep current – especially with regards to security updates.

- Windows 8.1, Windows 8 or Windows 7 - How to Disable Automatic Restart
<http://www.laptopmag.com/articles/disable-automatic-restart-windows>
- Windows 10 - How to disable automatic reboot after updates (several methods)
<http://tunecomp.net/disable-automatic-reboot-after-updates-installation-in-windows-10/>
 - For Windows 10, I successfully used the second method:
How to disable off automatic reboot using the Task Scheduler
